# Restraint tasks on Work List

This workflow explains how to specify restraint tasks on the Work List when they expired, renewed, or completed.

Try It Out

1. If the patient still needs restraints, nurses should **Renew** the order. Do <u>NOT</u> place a new order and let the previous one expire

2. If a patient no longer needs restraints, the order should be **Discontinued**

3. If expired tasks still appear on the Work List, the order must also be **Discontinued** for tasks to fall off
